EXPERIENCE

AI Engineer

Jul 2025 – Jul 2026

Strategic Research Insights

- Engineered an LLM-powered synthetic-persona platform that transformed structured research data into queryable insights for 10+ enterprise accounts, reducing research turnaround time by approximately 40%.
- Architected production AI and data workflows using Python, SQL, R, SAS, LLM APIs, ETL pipelines, and document-intelligence components to support natural-language querying across structured and unstructured sources.
- Strengthened LLM output reliability through source grounding, prompt engineering, schema validation, structured outputs, error handling, and systematic evaluation of inconsistent model responses.

Lead Data Analyst

Jan 2024 – Jun 2025

Jain Management / MBM

- Developed Python- and Selenium-based analytics automations and predictive models for 5+ Google Ads campaigns, contributing to approximately 30% higher marketing ROI and a 92% optimization score.
- Designed decision-ready dashboards and A/B testing workflows to identify performance trends and guide campaign-budget allocation.
- Translated analytical findings into clear recommendations that enabled non-technical stakeholders to make data-informed marketing decisions.

Data Scientist

Sep 2023 – Dec 2023

Bayer

- Analyzed 3M+ customer and campaign records using Python, SQL, exploratory data analysis, and segmentation techniques to uncover behavioral patterns and develop actionable customer personas.
- Created Tableau dashboards and stakeholder-ready reports that translated complex analytical findings into marketing and customer-experience decisions.
- Formulated customer-segmentation insights from large-scale behavioral data to support more targeted campaign strategies.

AI Intern

Jun 2023 – Jul 2023

Boost Money

- Fine-tuned a BERT-based named-entity recognition model with Hugging Face using labeled domain data, achieving approximately 92% entity-extraction accuracy.
- Integrated the NER model into an automated information-retrieval workflow, improving retrieval speed by approximately 30% through entity extraction and indexing.
- Evaluated entity-level predictions and refined data preparation workflows to improve model reliability for domain-specific retrieval use cases.

PROJECTS

AgentsHive | agentshive.net

Founder and Developer

- Founded and launched an open AI-agent registry cataloging 150+ agents across Claude Code, Codex, n8n, LangChain, and other ecosystems.
- Architected structured metadata, APIs, and search workflows to enable agent discovery across multiple development ecosystems.

Entity Extractor Pro | github.com/mananmaroo

NLP Project

- Developed a reusable entity-extraction application around a BERT NER workflow for practical document-processing and information-retrieval use cases.
- Implemented domain-specific NLP functionality that transformed unstructured text into structured entities for downstream search and retrieval.

SKILLS

AI / ML: regression, classification, NLP, Generative AI, LLMs, RAG/document intelligence, prompt engineering, agentic AI, BERT, XGBoost, Random Forest, SVM, Keras

Programming / Data: Python, SQL, Pandas, NumPy, ETL/data pipelines, Snowflake, relational databases, R, SAS, Git, FastAPI, Hugging Face

Cloud / BI: AWS, Azure, GCP, Tableau, Power BI

EDUCATION

New Jersey Institute of Technology

2023

M.S. in Data Science

Manipal University Jaipur

2022

B.Tech. in Computer & Communication Engineering
